## experience

- 2018 **Convercent** Denver, CO  
*Software Engineer*  
Front-End development with emphasis on usability and accessibility
- Utilized knockout.js and other front-end libraries to create UI
  - Worked with designers to create better consistency across the application.
  - Designed standards for building standards for better screen reader support.
  - Worked with Senior UX developer to create better usability across the application.
- 2016 - 2017 **DaVita** Denver, CO  
*Application Developer*  
Front-End development with React and Redux. Also, worked on the front-end of both iOS and Android.
- Utilized React and Redux to create an application for clinicians to engage with their patients.
  - Built out web components from mock-ups given by designers.
  - Ensured web designs were optimized for mobile, tablet and desktop.
  - Created and updated UI components for both Android and iOS apps.
  - Created and implemented guidelines to ensure that all mobile applications were accessible to patients.
- 2013– 2016 **Self - Employed** Denver, CO  
*Freelance Web Developer*  
Worked on a variety of projects ranging from web design to WordPress customization.
- Created new web sites from design to implementation such as [www.aspensoft.com](http://www.aspensoft.com).
  - Enhanced features and new themes on existing WordPress sites.
  - Worked on the front-end of Rails applications for an increased user experience
- 2014 **Fluentstream Technologies** Denver, CO  
*Software Developer*  
Front-end developer focusing on backbone.js. The application worked on was VOIP software that also allowed several features to the customer including trending analysis and call monitoring.
- Integrated web sockets for managers to monitor employee calls including listening, bumping customers into other queues, and interjecting into active conversations.
  - upgraded newer js libraries and deprecated redundant code. Gave existing app new theme and implemented changes.
